**User Input 1: Define Topic**
Enter the primary topic for your research analysis.

**User Input 2: Source Documents**
Upload relevant PDFs, transcripts, or data source files.

**Generator: Analyze Research**
1. Objective: Perform a comprehensive analysis of the research topic:"Define Topic". Cross-reference information from "Source Documents" to identify key insights, detect contradictions across the sources, and synthesize actionable MVP recommendations. Maintain strict grounding and only use the provided materials.

2. Output Format: Provide a structured text report with the following sections: Key Insights, Source Contradictions, and MVP Recommendations. Ensure every point is derived directly from the provided inputs. You are done when you have delivered the completed analysis and used system_objective_fulfilled.

3. User Input / Context:
Research Topic: "Define Topic"
Source Documents: "Source Documents"

**Output: Generate Synthesis Report**
Create a polished, professional research synthesis report that presents a sophisticated "Executive Strategy" aesthetic. The design should feel authoritative, premium, and highly structured, suitable for presentation to stakeholders or decision-makers.

### 1. Layout Organization
- **Hero Header**: A prominent top section featuring the "Research Topic" in a bold, large typeface. Include a subtitle indicating the synthesis nature of the document and a timestamp or "Confidential" badge for a professional touch.
- **Executive Summary Dashboard**: A high-level overview section using a 3-column grid to highlight meta-stats (e.g., number of sources analyzed, key themes identified, and confidence level).
- **Key Insights Gallery**: Display the core findings using a responsive grid of cards. Each card should have a clear heading, a concise summary, and a subtle icon representing the category of insight.
- **Contradiction Analysis Section**: A specialized, visually distinct container (perhaps with a soft tinted background) that specifically highlights conflicting data points found across sources. Use a "Source vs. Source" comparison layout to maintain clarity on discrepancies.
- **MVP Recommendations Roadmap**: A structured vertical timeline or a sequence of high-impact cards detailing actionable steps. Each recommendation should be clearly prioritized (e.g., High/Medium/Low impact).
- **Source & Grounding Footer**: A clean, technical section listing the source documents and URLs used, using a condensed layout to maintain a high information density without cluttering the page.

### 2. Style Design Language

- **Aesthetic Goal**: "Premium Business Intelligence." The look should be clean, modern, and trustworthy, avoiding excessive decorative elements in favor of high-quality typography and spacing.
- **Color Scheme**: Use a "Professional Navy & Slate" palette. Base colors: Deep Charcoal (#2D3436) for text, White (#FFFFFF) for backgrounds. Accent colors: A sophisticated Royal Blue (#0984E3) for links/headers and a subtle Emerald Green (#00B894) for "Success/Actionable" items. Use a light Grey (#F5F6FA) for section backgrounds to create depth.
- **Typography**: Utilize a clean, high-readability sans-serif stack (e.g., Inter, Montserrat, or system-default sans-serif). Use bold weights for headings and a slightly larger line height (1.6) for body text to ensure ease of reading during long analysis sessions.
- **Spacing & Elevation**: Implement generous whitespace (margins and padding) to separate distinct analytical thoughts. Use very subtle box-shadows on cards to create a layered, "dashboard" feel rather than a flat document.

### 3. Component Guidelines
- **Insight Cards**: Use white backgrounds with a thin 1px border. Include a "Source Tag" at the bottom of each card to indicate where the data originated.
- **Contradiction Callouts**: Use a "Warning" or "Alert" style UI component with a muted amber accent to draw the eye to areas where sources disagree.
- **MVP Action Items**: Use checkbox-style lists or "Step" components. Each recommendation should have a "Primary Action" button or highlighted text to drive the strategy forward.
- **Responsive Design**: Ensure the layout collapses into a single-column view for mobile devices, maintaining the hierarchy of the Executive Summary first, followed by Insights and Recommendations.
